

Key Outcomes

Team established sprint structure with rotating Scrum Masters, defined task organization in Linear, and agreed to prioritize user stories and feature requirements before deciding technology stack. Friday meeting with professor will focus on feature validation and clarifying web vs. mobile app differentiation strategy

Decisions Made

- **Sprint ownership:** Xiya (Sprint 1), Dan (Sprint 2), Sayli (Sprint 3), Erwan (Sprint 4), Kezhen (Sprint 5)
- **Scrum Master responsibilities:** Send meeting agenda via email, collect input from team, generate and distribute AI meeting notes with to-do lists, check the commitment and align with the sprint milestone
- **Task structure:** Xiya creates structured sprint tasks, make sprint planning in Linear based on course requirements; team members add detailed descriptions and acceptance criteria
- **Integration advisor:** Kezhen serves as coding advisor
- **Platform strategy:** Mobile app targets mainly students/customers; web app targets mainly organizers/businesses and customer function could be deemphasized (reference: Eventbrite model)
- **Technology decisions deferred:** Team will finalize features and user stories before deciding software architecture and database
- **Data sources:** Use such as real APIs from Meetup and Ticketmaster for genuine event data; fake data for organizer/business features

Sprint 1 Focus Areas

- **User stories development:** All team members could contribute feature ideas to Week 2 Google Drive document before Friday
- **Core requirements:** such as AI summary function, disability accessibility, crowd management integration with events, the first variety from Xiya is uploaded (<https://drive.google.com/drive/folders/1DxGeitQapZu1aKyNAodLu2nkSbzP1Sh>)
- **Nice-to-have features:** Meet friends/create groups, AI natural language search, quick in-app feedback (thumbs up/down), venue rating system
- **Budget tracking:** Team logs hours in Google Drive budget plan spreadsheet for burn-down chart generation

Pending Confirmation

- Whether Scrum Master presentations are still required with 5-person team (Dan will email professor)
- Preferred approach: real data APIs vs. simulated data
- Number of user stories to implement (depends on team capacity)

- Validation of web/mobile differentiation strategy

Role Assignments

- **Product Manager& UIUX + Sprint planning:** Xiya - creates user story backlog, defines structured tasks, coordinate all the issues relevant to product
- **Mobile + Git Repository & Workflow:** Kezhen
- **Frontend + CI/CD:** Sayli
- **Data&ML + Testing Orchestration:** Erwan - coordinates unit, integration, system, acceptance, and usability testing (20-25 hours per sprint estimated)
- **Backend + Coding coordination:** Dan

Meeting with Professor (Friday)

- **Purpose:** Present initial user stories, discuss feature priorities, ask clarifying questions
- **Format:** 10-minute team slot for status update and Q&A
- **Key questions to address:** Web vs. mobile differentiation strategy, data source preferences (real APIs vs. simulation), presentation requirements
- **Deliverables:** Baseline user stories with acceptance criteria, nice-to-have feature list

Next Steps

- Refine user stories together after Friday feedback session
- Select technology stack and define architecture after feature finalization
- Begin Sprint 1 implementation with validated requirements

Todo List:

- **Xiya:** Create Sprint 1 structured tasks in Linear from course requirements document
- **All team members:** Review user stories in Week 2 Drive folder and add feature suggestions before Friday
- **All team members:** Prepare questions for professor meeting on Friday
- **Dan:** Email professor to confirm if Scrum Master presentations still required
- **Xiya (Scrum Master):** Share AI-generated meeting notes and to-do list with team
- **All team members:** Log task hours in Google Drive budget plan spreadsheet
- **All team members:** Investigate on the software tools and assign the task on Linear which is relevant to their role and if there is unassigned tasks, scrum master could coordinate with relevant teammates
- **Xiya:** Scrum master checks the commitment after the sprint1
