

User Interview Answers:

User: 26 years old - Software engineer

What is your first impression of using the prototype? Is it fluent? Why?

The UI looks nice. It takes some time to get the events.

Before you use the prototype, how could you solve the question?

I get the recommendation from friends about the current activities.

Was there any part that immediately interested you or confused you?

There is only one category Arts&Theatre. There is no need to make the category.

Was there any step where you felt hesitant, uncertain, or had to try multiple times?

The browsing of the events takes the time and the current location on the webplatform and mobileplatform do not work properly.

Is the problem this product aims to solve important to you? Why?

Yes. It helps me to get the last-time discount.

Do you feel that it helped you accomplish what you wanted to do?

No.

Is there any feature that you feel is “nice to have” but not necessary?

No

If this product were launched tomorrow, in what situations would you use it?

If I have nothing to do and I am quite bored, I would use it to find something interesting.

Was there any information, button, process, or page that felt unnecessary?

No

What do you think is still missing for it to become truly usable?

There is no button to reserve the ticket.

Are you currently using any similar products, methods, or tools?

I use the toogoodtogo a lot.

Compared with your current approach, what advantages does this prototype have?

I could get more information, such as the busyness of the city, route planning

In what ways is it not as good as your current approach?

I don't think that the events are interesting to me.

In what situations would you choose to continue using your current method instead of this product?

If my friend suggests me.

Would you be willing to continue using this product? Why?

Yes. Because I will get the continuous information of the event.

Would you recommend it to others? Why or why not?

Yes. My friend will know the information of the event.

If this were a paid product, what kind of pricing or payment model would feel reasonable to you?

I would suggest that it gives the test phrase for 3 months. The payment is through stripe or other payment methods. The price is monthly paid.

On a scale from 1 to 10, how would you rate this prototype? Why not higher or lower?

8. The function of the product is simple and there is no highlight of that.

Is there anything important that we did not ask about but you would like to share?

I feel the mobile app's color palette is a bit too dark, which makes it less user-friendly.

Participant A - 28 years old

Participant B - 29 years old

Participant C - 26 years old

What is your first impression of using the prototype? Is it fluent? Why?

My first impression was good. The map was easy to understand, and moving between events felt pretty smooth.

It looked friendly and simple. Most parts were smooth, although I needed a little time to understand the map.

The main idea was clear straight away. It felt fairly smooth, but a few screens could be quicker.

Before you use the prototype, how could you solve the question?

I would normally check Instagram, student group chats, or ask friends what they were doing.

I would search on Google, look at university society pages, or wait for a friend to suggest something.

I would usually ask in a group chat or search Eventbrite and Google Maps.

Was there any part that immediately interested you or confused you?

The nearby event map interested me right away. I was only a little confused about what the different busy areas meant.

I liked the idea of filtering nearby events. I was confused about whether the busy areas showed real people or estimated activity.

The distance and time information interested me most. I was not sure how fresh the event information was.

Was there any step where you felt hesitant, uncertain, or had to try multiple times?

I hesitated when choosing an event because I was not sure if joining meant booking a place or just showing interest.

I tried the filters more than once because I was not sure if they had been applied.

I paused before using my location because I wanted to know why it was needed and how it would be stored.

Is the problem this product aims to solve important to you? Why?

Yea. I sometimes want to go out but do not know what is happening nearby, especially at short notice.

Yes, but mainly because finding a suitable event can take too much time. I care more about small, comfortable events than busy ones.

Sometimes. The problem is important when I have free time at short notice, although I do not look for events every day.

Do you feel that it helped you accomplish what you wanted to do?

Yes, it helped me find a possible event much faster than checking several apps.

Mostly yes. I found options faster, but I would still want more details before deciding to go.

Yes. It gave me a quick overview, which is what I wanted.

Is there any feature that you feel is “nice to have” but not necessary?

All good.

Seeing popular areas is useful, but it is not necessary for me.

The heatmap looks interesting, but for me it is less important than good search and filters.

If this product were launched tomorrow, in what situations would you use it?

I would use it on a free evening, after class, or when my friends suddenly want to do something.

I would use it when I am new somewhere, have a quiet weekend, or want to meet people through a small activity.

I would use it between classes, while travelling, or when a plan gets cancelled and I need another option nearby.

Was there any information, button, process, or page that felt unnecessary?

Some of the extra details on the event page felt a bit long. The time, place, price, and number of people were enough for me.

I did not really need every map control. A simpler map view would be fine.

The onboarding could be shorter. I would rather start browsing and learn the features while using the app.

What do you think is still missing for it to become truly usable?

It needs more real events, clearer information about who is attending, and a simple way to invite a friend.

I would want better safety information, verified hosts, accessibility details, and clearer privacy settings.

It needs reliable live updates, saved preferences, calendar sharing, and better transport or walking-time information.

Are you currently using any similar products, methods, or tools?

I currently use Instagram, WhatsApp groups, Eventbrite, and sometimes Google Maps.

I use Google, Meetup, university emails, and society Instagram pages.

I use Eventbrite, Google Maps, Instagram, and friends' recommendations.

Compared with your current approach, what advantages does this prototype have?

It puts nearby last-minute options in one place and shows distance clearly.

It is faster and more visual, and it focuses on things close to me.

It is quicker for nearby events and is better for last-minute decisions.

In what ways is it not as good as your current approach?

My current group chats feel more trustworthy because I already know the people sharing the event.

Other platforms usually have more reviews, photos, and information about the organiser.

The current tools have more complete listings and better organiser reviews.

In what situations would you choose to continue using your current method instead of this product?

I would keep using group chats when I am planning with close friends or looking for a specific event.

I would use my current methods for an important event, a paid event, or anything where I need to trust the organiser.

I would use my current method when planning several days ahead or buying an expensive ticket.

Would you be willing to continue using this product? Why?

Yes. I would continue using it if the event list stays active and up to date.

Maybe. I would use it sometimes if there were enough safe and well-described events.

Yes, but probably only once or twice a week. It would need accurate information to become a habit.

Would you recommend it to others? Why or why not?

Yes, especially to students who are new to the city or often make spontaneous plans.

I would recommend it with some caution. The idea is good, but people should still check the event details.

I would recommend it to people who often have gaps in their schedule, but not as their only event app yet.

If this were a paid product, what kind of pricing or payment model would feel reasonable to you?

A free version would be best. I might pay about EUR 2 to 3 per month for extra filters or no ads.

I would prefer a free app. A small booking fee for paid events would feel more reasonable than a subscription.

I would not want a monthly subscription. A free basic version with optional paid event promotion would make sense.

On a scale from 1 to 10, how would you rate this prototype? Why not higher or lower?

I would give it 8 out of 10. The idea is useful and easy to understand, but it needs more events and clearer joining steps.

I would rate it 7 out of 10. It is useful and easy enough, but trust, privacy, and event details need more work.

I would give it 6 out of 10. The concept is strong, but the usefulness depends on having enough current events.

Is there anything important that we did not ask about but you would like to share?

A way to report old or incorrect events would be helpful.

It would be good to let users choose whether they want busy social events or calm small-group activities.

The app should clearly show when each event was last updated.

Interview:

1 - User (Graduate 24 years old)

2 - User (Journalist 24 Years old)

3 - User (Personal Trainer 23 years old)

1. What is your first impression of using the prototype? Is it fluent? Why?
 1. **Mostly fluid. I would like to search my events. I don't think you should have undefined categories. Error to put time same as some other time. Filling out form.**
 2. **Areas are fluid but some aren't there 7/10, payment isn't on the web, pricing isn't there. Map shouldn't take over the app. But it is cool.**
 3. **Yea, it is very clear, structure, different boxes, nice difference between photos and writing. Very efficient.**
2. Before you use the prototype, how could you solve the question?
 1. Chatgpt, grok (LLM's) ask friends etc.
 2. Ticketmaster (but he doesn't use it) , doesn't go out much so maybe gym. Mostly through mates.
 3. Ticketmaster (but you don't use it), she doesn't go to events like that, but ask chatgpt or google what's happening.
3. Was there any part that immediately interested you or confused you?
 1. Wasn't aware that web app was for creators, but I guess seeking it out would explain it, and that mobile was for users. But nothing else.

2. The variety interested, there is more than just concert, confused me -> how it works, these places used social media, maybe by a concept a bit, but I picked up it at the end.
3. Nothing
4. Was there any step where you felt hesitant, uncertain, or had to try multiple times?
 1. Ask to setting up a listing, a few times to set it as active
 2. payment
 3. Going back without pulling screen up, like you needed to swipe up.
5. Is the problem this product aims to solve important to you? Why?
 1. Not necessarily important to me, or targeted towards me so I am not the right person to ask.
 2. In this economy not many young people go to the events as much. It is a good idea, and niche, but consumer base isn't there, but young people broke, but old people aren't good with technology
 3. Young people don't really have money, and if people want to go to an event they will just save for that event rather than still spending money on random stuff.
6. Do you feel that it helped you accomplish what you wanted to do?
 1. Yes
 2. Yes
 3. Yes very efficient
7. Is there any feature that you feel is "nice to have" but not necessary?
 1. Roulette wheel (added it)
 2. Map -> weird payment
 3. Design
8. If this product were launched tomorrow, in what situations would you use it?
 1. If I had nothing to do and I was bored with pals.
 2. It could be fun for dating, use fromo to go out if you don't know what to do with people or a date
 3. If I had no plans and I wanted to do something
9. Was there any information, button, process, or page that felt unnecessary?
 1. Going to your phone to pay
 2. Going to your phone to pay
 3. Not really
10. What do you think is still missing for it to become truly usable?
 1. Roulette wheel for random events could be cool
 2. Social media -> everyday post, with best deals (marketing)
 3. Marketing would be really important
11. Are you currently using any similar products, methods, or tools?
 1. No
 2. No
 3. Toogoodtogo
12. Compared with your current approach, what advantages does this prototype have?
 1. Getting the discounts (maybe how much I saved shows me a steal)

2. Encentivise to get out see stuff on the same day.
3. Discounts
13. In what ways is it not as good as your current approach?
 1. I dont' have a Curren't approach
 2. I don't have a Curren't approach
 3. I don't have a Curren't approach
14. In what situations would you choose to continue using your current method instead of this product?
 1. If the discounts weren't as big, no point really.
 2. If the discounts weren't as big, no point really.
 3. If the discounts weren't as big, no point really.
15. Would you be willing to continue using this product? Why?
 1. Yes for the discounts
 2. Yea if I was looking for a last moment event's I would use it
 3. Yes for the discounts
16. Would you recommend it to others? Why or why not?
 1. Yes have more friends to go with, and also everyone loves a discount
 2. Yes have more friends to go with, and also everyone loves a discount
 3. Yes have more friends to go with, and also everyone loves a discount
17. If this were a paid product, what kind of pricing or payment model would feel reasonable to you?
 1. Small cut of the events
 2. Small cut of the events
 3. Small cut of the events
18. On a scale from 1 to 10, how would you rate this prototype? Why not higher or lower?
 1. 8 -> clear -> well done some unessari stuff , some stuff nice to have, but bones are there, decent skeleton
 2. 7 -> good idea but needs to be executed correctly with marketing
 3. 7 -> a little boring setup needs more stuff
19. Is there anything important that we did not ask about but you would like to share?
 1. Ryanair link up, do something cool like, participate in this event in Spain that is happening now etc.
 2. No
 3. No

Anonymous User:

1. Very good first impression, intuitive UI on the mobile app. Appealing design
3. Immediately interested by the accessibility setting, I questioned the relation of the app with the actual events (can you book on the app? Does it transfer to another? Both?)
4. Bug on the digital map, had to restart the app.
6. Diminishes the friction of having to look for events in your area. Gives opportunities tailored to a university student. Although not precise enough, and can't be adjusted as to what type of events if not to arts and ..., which is like everything.

- 7. I would say there are only necessary and no nice to have's (not necessarily positive)
- 9. Should be able to access map without login
- 10. Events and usable maps, price range for events, more customisability in the choice of type of events.
- 11. I don't use similar products
- 16. Would not use, not the target audience. I would recommend it to someone less homebody than me.
- 17. Small organiser fee on each ticket (Assuming data broking in some shape or form).
- 18. 7/10: great job presenting the idea but lacks core functionality such as live events and accurate maps.
